DOCUMENT REVIEW MANAGER

IDinc's Documentation Review Manager is designed for Hospital based Clinical Documentation Improvement Specialists to record their reviews, create and submit physician queries, monitor physician responses and calculate the direct financial impact of their efforts.

A Rules Engine monitors admissions to the hospital and automatically assigns reviews to the Documentation Specialists.

The system includes a set of query forms that can be edited, however, each client can also load their own query forms. The system automatically merges the relevant information such as Patient, Diagnosis, Physicians into the forms and allows printing or electronic transfer of the form into the Patient Medical Record or the organization's Document Imaging System.

DRG, CC and MCC codes are assigned to each case through look up tables and are used to calculate the financial impact of the reviews.

With the Documentation Review Manager hospitals are assured to maximize their reimbursement for all the care provided. Proper documentation also avoids unnecessary losses associated with RAC audits.

Sophisticated reports keep track of the revenue generated and revenue lost because records were not reviewed or physician queries were not responded.

DOCUMENT REVIEW MANAGER

Major Features and Functions

- Electronic Interface to other systems for Patient and Physician data
- Automatic assignment of reviews via Rules Engine
- Workflow driven process customized to organization's policies
- Unlimited number of user definable physician queries
- Case specific physician queries populated with relevant data
- Track queries, responses, revenue and losses
- Sophisticated reports to monitor response rates and reviewer productivity
