SECURITY EVENT MANAGEMENT

IDinc's Security Event Manager is used by uniformed security officers to log and manage their activities. With this module you can standardize the event reporting and management process and consolidate all the data relevant to an incident by attaching all related pictures and documents to the event.

A comprehensive set of standard reports, graphs and an adhoc report generator enables management to keep track of Security Officer's activity.

Specific modules include:

- **Patient Care**
Cases of combative patient, baker act, restraints...etc. are logged and managed according to the organizations policies.
- **Activity Log**
Cases such as Alarms, Assistance, Criminal Activity, Disturbance, Lock Down, Investigations, Suspicious Person Search, Trespassing...etc. are managed with this option
- **Lost and Found**
A sophisticated inventory management system tracks lost and founds items. It automatically matches lost to found items and records return to owners and disposals to local agencies
- **Vehicle Accidents**
Information related to vehicular accidents, including police reports and schematics of the damage and other relevant information is tracked with this module.

SECURITY EVENT MANAGEMENT

Major Features and Functions

- On-line reporting of events with unlimited security types of event customized per client
- Roles based access to protect security information
- Picture capable on found items
- Automated Task Assignments such as Initial Response, Corrective Action
- Standard and ad hoc reports viewable with a few clicks and transferable to Excel
