Healthcare Compliance Management

IDinc

Software for Risk, Quality and Compliance

Compliance Modules

The compliance modules are a set of independent solutions designed to address challenges specific to the healthcare provider setting.

Policy

The Policy Manager displays all of the organization's policies in the familiar Microsoft folders tree, which can be searched by titles and keywords. It also facilitates all activities related to the lifecycle of the policies, including authoring, versioning, routing for review and approval, notifying, approving and archiving of the documents. It is the repository of time-critical documents that need to be reviewed periodically.

Contract & License

The Contract and License module is used to inventory and manage legally binding and time-sensitive documents. It provides online, real-time access to a database that automatically tracks and manages all contracts, permits, certificates and licenses within the organization. A tickler system alerts responsible parties of critical dates, such as an upcoming expiration. Notifications, reminders and escalation notices are shared via email.

Documentation Review

The Documentation Review module is designed for Clinical Documentation Improvement Specialists to record their reviews, create and submit physician queries, monitor physician responses and calculate the direct financial impact of their efforts. The system automatically merges the relevant information such as Patient, Diagnosis, Physicians and more into the physician query forms and allows printing or electronic transfer of the form into the Patient Medical Record.

Forms

The Forms module merges relevant data into forms that can be displayed and printed from any workstation or displayed on iPads or other tablet devices to be completed and signed with a stylus. When completed, the form then can be printed or electronically transferred into patients' medical records. You can learn more about the forms module by visiting www.FormLeaf.com.

Services

In addition to state of the art applications, IDinc delivers a complete set of services to assure you benefit from all of the features and functions of the solutions. IDinc installs the software applications and trains your system administrator. IDinc also assists with end-user training and is always available to answer questions that might arise during training sessions. IDinc provides remote assistance for any questions you have regarding the software applications. In response to client requests, IDinc regularly updates all of our modules with new features requested as well as regulatory requirements.
